### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas C. Webster on August 31, 2006.

2. The application has been amended as follows:

Claim 1. (Currently Amended) A data processing apparatus comprising: a body having a memory for storing program code and data, and a processor for processing the program code and data, and a first group of control elements and a second group of control elements for entering data and performing control operations; a numeric keypad moveably coupled to the body, the numeric keypad moveable from a first keypad position to a second keypad position in relation to the body, wherein both the first and second groups of control elements are exposed when the numeric keypad is in the second position, and wherein only the second group of control elements are exposed when the numeric keypad is in the first position; and a display moveably coupled to the numeric keypad, the display moveable from a first display position to a second display position in relation to the numeric keypad, wherein the numeric keypad is not exposed when the display is in the first position and wherein the numeric keypad is exposed when the display is in the second position. position; and the data processing

**apparatus further comprising: a switch configured to trigger when the numeric keypad is moved between the first position and the second position; and image inversion logic to invert images on the display responsive to the switch triggering.**

Claim 17. (Currently Amended) A data processing apparatus comprising: a body having a memory for storing program code and data, and a processor for processing the program code and data, and a plurality of control elements for entering data and performing control operations; a numeric keypad moveable from a first keypad position to a second keypad position in relation to the body, wherein certain of the plurality of control elements are exposed when the numeric keypad is in the second position and covered when the numeric keypad is in the first position; and a display moveable from a first display position to a second display position in relation to the numeric keypad, wherein the numeric keypad is not exposed when the display is in the first position and wherein the numeric keypad is exposed when the display is in the second position. **position; and the data processing apparatus further comprising: a switch configured to trigger when the numeric keypad is moved between the first position and the second position; and image inversion logic to invert images on the display responsive to the switch triggering.**

Claim 33. (Currently Amended) An apparatus comprising: data processing device means having a memory for storing program code and data, and a processor for processing the program code and data, and a plurality of control elements for entering data and performing control operations; numeric data entry means moveable from a first keypad position to a second keypad position in relation to the data processing device means, wherein certain of the plurality of control elements are exposed when the numeric data entry means is in the second position and covered when the numeric data entry means is in the first position; and display means moveable from a first display position to a second display position in relation to the numeric data entry means, wherein the numeric data entry means is not exposed when the display is in the first position and wherein the numeric data entry means is exposed when the display is in the second position. position; and the apparatus further comprising: a switch configured to trigger when the numeric keypad is moved between the first position and the second position; and image inversion logic to invert images on the display responsive to the switch triggering.

***Allowable Subject Matter***

3. Claims 1-33 are allowed.

4. The following is an examiner's statement of reasons for allowance: The prior arts Finke-Anlauff, Griffin et al, Shkolnikov, fail to teach a data processing apparatus comprising: a numeric keypad moveably coupled to the body, the numeric keypad moveable from a first keypad position to a second keypad position in relation to the body, wherein both the first and second groups of control elements are exposed when the numeric keypad is in the second position, and wherein only the second group of control elements are exposed when the numeric keypad is in the first position; a display moveably coupled to the numeric keypad, the display moveable from a first display position to a second display position in relation to the numeric keypad, wherein the numeric keypad is not exposed when the display is in the first position and wherein the numeric keypad is exposed when the display is in the second position; and the data processing apparatus further comprising: a switch configured to trigger when the numeric keypad is moved between the first position and the second position; and image inversion logic to invert images on the display responsive to the switch triggering as claimed in Claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
